Genetic Assessment for ASDs: Please Share Your Thoughts

Are you an adult with an ASD or the parent/guardian of a child (or children) with an ASD?

The B.C. **Autism Spectrum Interdisciplinary Research (ASPIRE)** Team, in collaboration with **ASD-CARC**; needs your help to measure the **value and impact of Medical Genetics Assessments for ASDs**.

The inclusion of a Medical Genetics Consultation is becoming increasingly accepted and recognized as an important part of the standard of care in ASD diagnosis, evaluation and counseling.

This study is looking at whether a medical model for evaluating ASDs **may improve:**

- Understanding of the causes of ASD;
- The ability to better manage ASD conditions with advance knowledge; and,
- Outcomes and hopefully quality of life for individuals and their families.

We have created a questionnaire to measure your perceptions on the **Value and Impact of a Medical Genetics Assessment for ASDs**. The questionnaire also provides a unique opportunity for respondents to express their views and share experiences about other important aspects of their diagnosis.

How Can I Help?

For instructions on how to take part please visit our [Study Page](#):

[Clinical Genetic Evaluation and Counseling for Autism Spectrum Disorders: Patient and Family Perspectives of Their Value and Impact](#)

If you have any problems logging in or signing up please [Contact Us](#).

This research is made possible through your participation.

THANK YOU!

Principal Investigators: Prescilla Carrion (MSc Candidate, UBC) and [Suzanne Lewis](#), MD, FRCPC
Co-investigators: Jeanette Holden, PhD, Susan Creighton, MSc, Melissa Hudson, BSc and Levina Kasmara, BA.
Institutions: University of British Columbia, Vancouver, and Queen's University, Kingston, Ontario
