

Assessing feasibility and effectiveness of an online parent resource to support safe and active sport and recreation for children with Autism Spectrum Disorder (ASD)

STUDY PURPOSE

Researchers at UBC Okanagan are looking for individuals to provide input for developing and testing an online training resource for supporting parents raising a child on the autism spectrum. The resource will focus on fostering sport and recreation participation and on child safety needs.

ELIGIBILITY

Parents (mothers and/or fathers) of children with ASD aged **3-18 years old** or **service providers** who work with families of children with ASD ages 3-18 years.

DETAILS

Participants will take part in an online survey taking approximately 20 minutes. If interested, please click the following link:
https://ubc.ca1.qualtrics.com/jfe/form/SV_b3AMfqvK7kP6YMS

BENEFITS

Contribution to research that aims to improve physical activity and safety for children on the autism spectrum.

Opportunity to share your thoughts and ideas regarding parent online resources about keeping children active and safe.

There are 3 brief COVID19 related questions on this survey, and you may choose to skip these questions.
